Hi Melissa,

Waldo leads a beam trawl sampling program along the Newport NH Line, an which is located here at OSU. He has asked me to search the existing data individual Petrale sole recorded in the data base. There are also records froi There are not many Petrale caught in our survey, but from what is there I wo 10 or 15 miles from shore at a depth of 80-100m.

We are in the process of entering data in the data base, so maybe in a mont they settle.
